QUESTION 5
Multiple choice question (1/1 MARKS)
A PoC in ethical hacking is a collection of evidence like screenshots, videos, and HTTP requests along with a sequence of steps that were used to test and exploit a loophole.
A. True
B. False
That's right!
Solution
Correct answer : A
Your answer : A
Explanation
A PoC in ethical hacking is a collection of evidence like screenshots, videos, and HTTP requests along with a sequence of steps that were used to test and exploit a loophole. These steps must be explained in such a way that a technical person like a developer should be able to follow the steps and replicate the same vulnerability at his own end. A PoC can be in any format like pptx, text file, or a video.

QUESTION 7
Multiple choice question (1/1 MARKS)
Writing a report from a hacker's perspective is the best way to convey your bug findings.
A. True
B. False
That's right!
Solution
Correct answer : B
Your answer : B
Explanation
Writing a report from a hacker's perspective is a 'Big No'. You cannot expect the reader to understand the hacking concepts. You need to write a report in such a way that the developer can understand it easily and patch it. This means putting screenshots of how you found a bug is not required while how you exploited it and what data it's leaking is important.

QUESTION 8
Multiple choice question (1/1 MARKS)
Making mute videos and using text editors to type instructions and taking the screenshots of every step is an important tip while taking a PoC.
A. True
B. False
Bravo! Correct answer.
Solution
Correct answer : A
Your answer : A
Explanation
When generating a PoC there are many important things to consider like taking relevant screenshots with only required region, making mute videos and using text editors to type instructions and writing down every step of your process in your text editor (information you found, vulnerabilities, interesting blogs/links that you read to find the vulnerability, links to automated scripts/exploits you found online, data you found after exploiting everything).

QUESTION 9
Multiple choice question (1/1 MARKS)
Cross Site Scripting vulnerability can be prevented by Performing proper output encoding of special characters like < > " '
A. True
B. False
Well done! Correct answer.
Solution
Correct answer : A
Your answer : A
Explanation
Cross Site Scripting happens when the user controlled input is reflected somewhere else in an HTML page and is not encoded/sanitised properly. This allows a hacker to inject HTML code in the affected page. So, the fix is to make sure that any input which is taken from a user, when being written into an HTTP response should be cleaned first like performing proper output encoding of special characters like < > " '

QUESTION 14
Multiple choice question (1/1 MARKS)
Detailed Business impact with proofs of all kind of information you extracted during the exploitation and information summarizes everything a hacker can do if an attack happens. These are some of the key points in High Level Management Summary report:
A. True
B. False
Bravo! Correct answer.
Solution
Correct answer : A
Your answer : A
Explanation
The In-charge for the security operations of a company mainly needs to know the business impact of the bug, how it can be used to affect the organisation and its customers. Also, he needs to get an overview of the security status of the application/organisation in general.
